

Now, we wanted our small circles to be clickable!

Do you remember, in every app, we have something that we can click! Or even on elevator, or remote!

What do we call it?

Button!

This is how we create button!

```
Button(action: {  
    color = Color.yellow  
}, label: {  
    Circle()  
        .foregroundColor(Color.yellow)  
        .frame(height: 60)  
}))
```
