

In our button, we assigned a new value into our color variable to change the color

```
Button(action: {  
    color = Color.yellow  
}, label: {  
    Circle()  
    .foregroundColor(Color.yellow)  
    .frame(height: 60)  
})
```

That's why we declare color variable with @State

```
@State var color = Color.red
```
